Paper code- 345: BUSINESS STATISTICS

Duration: 3 hrs.

Marks 100 (External 80 : Internal 20)

Lectures: 65

Objective: The objective of this course is to familiarize students with the basic statistical tools to summarize and analyze quantitative information for decision making.

Expected Learning Outcomes: The student is expected to be equipped with the tools of processing and description of statistical data. In addition, the student will develop competence to use computer for statistical calculations especially for comparatively large- sizes problems.

Unit I:

15 Lectures

Statistical Data and Descriptive Statistics

Nature and classification of data: univariate, bivariate and multivariate data; time- series and cross-sectional data.

Measures of central tendency

- a) Mathematical averages including arithmetic mean, geometric mean and harmonic mean. Properties and applications.
- b) Positional Averages: Mode and Median (and other partition values including quartiles, deciles, and percentiles) (including graphic determination)

Measures of variations: absolute and relative.

Range, quartile deviation, mean deviation, standard deviation, and their coefficients, Properties of standard deviation/variance.

Skewness: Meaning, Measurement using Karl Pearson and Bowley's measures; concept of Kurtosis.

Unit II:

15 Lectures

Probability and Probability Distribution

Theory of Probability, Approaches to the calculation of probability.

Calculation of event probabilities. Addition and multiplication laws of probability (proof not required)

Conditional probability and Bayes' Theorem (proof not required)

Expectation and variance of a random variable.

Unit III:

15 Lectures

Simple Correlation and Regression Analysis

Correlation Analysis: Meaning of correlation, simple, multiple and partial, linear and non- linear, Pearson's coefficient of correlation; Calculation and properties (proofs not required), Rank Correlation. Regression Analysis. Principles of least squares and regression lines, Regression equations and estimation; Properties of regression coefficients; Relationship between Correlation and Regression coefficient.

Unit IV:**10 Lectures****Index Number**

Meaning and uses of Index numbers, Constructions of Index numbers: fixed and chain base: univariate and composite. Aggregative and average of relatives- simple and weighted.

Tests of adequacy of Index numbers, Base shifting, Problems in the construction of index number.

Construction of consumer price indices.

Unit V:**10 Lectures****Time Series Analysis**

Components of time series, Additive and multiplicative models.

Trend analysis. Fitting of trend line using principles of least square- linear, second degree parabola and exponential. Conversion of annual linear equation to quarterly/monthly basis and vice- versa; Moving averages.

Seasonal Variations: Calculation of seasonal indices using simple averages, Ratio- to- trend, and Ratio- to-moving averages methods, Uses of Seasonal Indices.

The students will be familiarized with software and the statistical and other functions contained therein related to formation of frequency distributions and calculation of averages, measures of variation, correlation and regression coefficients.
